Ball Spline Series

Structure and Features

The Ball Spline is an innovative linear motion system in which balls accommodated in the spline nut transmit torque while linearly moving on precision-ground raceways on the spline shaft.

Unlike the conventional structure, a single spline nut can provide a preload with THK's Ball Spline. As a result, the Ball Spline demonstrates high performance in environments subject to vibrations and impact loads, locations where a high level of positioning accuracy is required or areas where high-speed kinetic performance is required.

In addition, even when used as an alternative to a linear bushing, the Ball Spline achieves a rated load more than 10 times greater than the linear bushing with the same shaft diameter, allowing it to compactly be designed and used in locations where an overhung load or a moment load is applied.

Thus, the Ball Spline provides a high degree of safety and long service life.

Classification of Ball Splines

There are three types of the Ball Spline: medium-torque type, high-torque type and rotary type. You can choose a type according to the intended use. In addition, wide arrays of spline nut shapes are available for each type, enabling the user to choose a desired shape according to the mounting or service requirements.

Classification		Type	Shape	Shaft diameter
Medium-torque type		Model LT		Nominal shaft diameter: 4 to 100 mm
		Model LF		Nominal shaft diameter: 6 to 50 mm
High-torque type		Model LBS Model LBST		Nominal shaft diameter: 6 to 150 mm
		Model LBF		Nominal shaft diameter: 15 to 100 mm
		Model LBR		Nominal shaft diameter: 15 to 100 mm
		Model LBH		Nominal shaft diameter: 15 to 50 mm
Rotary type	 	Model LTR-A Model LTR		Nominal shaft diameter: 8 to 60 mm
		Model LBG Model LBG T		Nominal shaft diameter: 20 to 85 mm

	Structure and features	Major applications
	<ul style="list-style-type: none"> ● The spline shaft has two to three crests. On both sides of each crest, two rows (four to six rows in total) of balls are arranged to hold the crest from both sides. This design allows an appropriate preload to be evenly applied. ● The contact angle of 20° and an appropriate preload level eliminate angular backlash, providing high-torque moment rigidity. 	<ul style="list-style-type: none"> ● Shaft for die setting and similar applications requiring linear motion under a heavy load. ● Loading system and similar applications requiring rotation to a given angle at a fixed position. ● Automatic gas-welding machine spindle and similar applications requiring a whirl-stop on one shaft. ● Column and arm of industrial robot ● Spot-welding machine ● Riveting machine ● Book-binding machine ● Automatic filler ● XY recorders ● Automatic spinner ● Optical measuring instrument
	<ul style="list-style-type: none"> ● The spline shaft has three crests equidistantly formed at angles of 120°. On both sides of each crest, two rows (six rows in total) of balls are arranged to hold the crest from both sides. The angular-contact design of the ball contact areas allows an appropriate preload to be evenly applied. ● Since the balls circulate inside the spline nut, the outer dimensions of the spline nut are compactly designed. ● Even under a large preload, smooth linear motion is achieved. ● Since the contact angle is large (45°) and the displacement is minimal, high rigidity is achieved. ● No angular backlash occurs. ● Capable of transmitting a large torque. 	<ul style="list-style-type: none"> ● Column and arm of industrial robot ● Automatic loader ● Transfer machine ● Automatic conveyance system ● Tire molding machine ● Spindle of spot-welding machine ● Guide shaft of high-speed automatic coating machine ● Riveting machine ● Wire winder ● Work head of electric discharge machine ● Spindle drive shaft of grinding machine ● Speed gears ● Precision indexing shaft
	<ul style="list-style-type: none"> ● A lightweight, compact type based on model LT, but has a spline nut circumference machined to have angular-contact type ball raceways to accommodate support bearings. 	<ul style="list-style-type: none"> ● Z axis of scalar robot ● Wire winder
	<ul style="list-style-type: none"> ● A unit type that has the same contact structure as model LBS. The flange circumference on the spline nut is machined to have gear teeth, and radial and thrust needle bearings are compactly combined on the circumference of the spline nut. 	<ul style="list-style-type: none"> ● Speed gears for high-torque transmission

Conditions and Guidelines for Selecting of a Preload

Table 1 provides guidelines for selecting a clearance in the rotational direction with given conditions of the Ball Spline.

The rotational clearance of the Ball Spline significantly affects the accuracy and rigidity of the spline nut. Therefore, it is essential to select a correct clearance according to the intended use. Generally, the Ball Spline is provided with a preload. When it is used in repeated circular motion or reciprocating straight motion, the Ball Spline is subject to a large vibration impact, and therefore, its service life and accuracy are significantly increased with a preload.

Table 1 Guidelines for Selecting a Clearance in the Rotational Direction for the Ball Spline

Clearance in rotational direction	Service conditions	Example of application
Medium preload (CM)	<ul style="list-style-type: none"> ● High rigidity is required and vibration impact is present. ● Receives a moment load with a single spline nut. 	Steering shaft of construction vehicle; shaft of spot-welding machine; indexing shaft of automatic lathe tool rest
Light preload (CL)	<ul style="list-style-type: none"> ● An overhung load or moment is present. ● High positioning accuracy is required. ● Alternating load is applied. 	Industrial robot arm; automatic loaders; guide shaft of automatic coating machine; main shaft of electric discharge machine; guide shaft for press die setting; main shaft of drilling machine
Normal grade (No symbol)	<ul style="list-style-type: none"> ● Smooth motion with a small force is desired. ● A torque is always applied in the same direction. 	Measuring instruments; automatic drafting machine; geometrical measuring equipment; dynamometer; wire winder; automatic welding machine; main shaft of honing machine; automatic packing machine

Accuracy Standards

The accuracy of the Ball Spline is classified into three grades: normal grade (no symbol), high grade (H) and precision grade (P), according to the run-out of spline nut circumference in relation to the support of the spline shaft. Fig. 3 shows the measurement items.

Fig.3 Accuracy Measurement Items for the Ball Spline

Note 1: Models LBS6 and 8 are end cap types.

With models LBS6 and 8, do not give a shock to the end cap.

Note 2: A high-temperature type is not available for miniature Ball Splines.

○: For those models, high-temperature types (metal retainer, service temperature: up to 100°C) are available.

(Example) LBS20 A CL+500L H

Symbol for high-temperature type

●: Those models can be attached with a felt seal.

Ball Splines using metal retainers cannot be attached with a felt seal.

M2.6×3	3.4	8	4	1.96	2.94	1.47	2.55	5.9	0.69	0.24	0.08	0.4
M3×4	3.4	10	4	3.92	7.84	2.84	4.9	15.7	0.77	0.3	0.13	0.62
M4×6	4.5	16	6	31.3	34.3	7.05	12.6	67.6	6.7	6.4	0.35	1.6
M5×8	4.5	20	6	56.8	55.8	10.2	17.8	118	7.4	7.8	0.51	2.5
M5×8	5.5	25	6	105	103	15.2	25.8	210	9.7	10.6	0.79	3.9
M6×10	6.6	32	6	180	157	20.5	34	290	10.5	12.5	1.25	5.6
M6×10	9	40	6	418	377	37.8	60.4	687	16.5	20.7	2.51	9.9

Note 1: M_A indicates the permissible moment value in the axial direction when a single spline nut is used.

Note 2: For details on the maximum lengths of ball spline shafts by accuracy, please see page 8.

Model LTR

Dimensional Table for Models LTR

Model No.	Spline nut dimensions										
	Outer diameter		Length	Flange diameter	D_e h7	H	L_1	E	PCD	PCD1	$S \times l$
	D	Tolerance	L	D_1							
LTR 16	52	0 -0.007	50	68	39.5	5	37	10	60	32	M5×8
LTR 20	56		63	72	43.5	6	48	12	64	36	M5×8
LTR 25	62		71	78	53	6	55	13	70	45	M6×8
LTR 32	80	0 -0.008	80	105	65.5	9	60	17	91	55	M6×10
LTR 40	100		100	130	79.5	11	74	23	113	68	M6×10
LTR 50	120		125	156	99.5	12	97	25	136	85	M10×15
LTR 60	134	0 -0.009	140	170	115	12	112	25	150	100	M10×15

Example of model number coding

2	LTR50	K	UU	ZZ	CM	+1000L	H	K
Number of spline nuts on one shaft (no symbol for one spline nut)	Model number Flange orientation symbol No symbol: standard K: flange inversed	Spline nut dust prevention accessory symbol UU: rubber seal attached on both ends of spline nut	Support bearing dust prevention accessory symbol ZZ: rubber seal attached on both ends of support bearing	Symbol for clearance in the rotational direction (see page 6)	Accuracy symbol (see page 7)	Overall spline shaft length (in mm)	No symbol: without seal	Symbol for standard hollow spline shaft (no symbol: solid spline shaft)

Unit: mm

d _i	U (See Note 1)	Spline shaft diameter		No. of rows of balls	Basic torque rating		Basic load rating		Static permissible moment  M _A (See Note 2) [N-m]	Support bearing basic load rating		Mass	
		D ₀ h7	C _T [N-m]		C _{0T} [N-m]	C [kN]	C ₀ [kN]	C [kN]		C ₀ [kN]	Spline nut [kg]	Spline shaft [kg/m]	
4.5	5	16	6	31.4	34.3	7.06	12.6	67.6	12.7	11.8	0.51	1.6	
4.5	7	20	6	56.9	55.9	10.2	17.8	118	16.3	15.5	0.7	2.5	
4.5	8	25	6	105	103	15.2	25.8	210	17.6	18	0.93	3.9	
6.6	10	32	6	180	157	20.5	34	290	20.1	24	1.8	5.6	
9	13	40	6	419	377	37.8	60.5	687	37.2	42.5	3.9	9.9	
11	13	50	6	842	769	60.9	94.5	1340	41.7	54.1	6.7	15.5	
11	13	60	6	1220	1040	73.5	111.7	1600	53.1	68.4	8.8	22.3	

Note 1: Dimension U represents the dimension from the head of the hexagon socket screw to the spline nut end.

Note 2: M_A indicates the permissible moment value in the axial direction when a single spline nut is used.

Note 3: For details on the maximum lengths of ball spline shafts by accuracy, please see page 8.

THK Ball Spline Series

Precautions on use

● Precautions on Handling

- Disassembling components may cause dust to enter the system or degrade mounting accuracy of the components. Do not disassemble the components.
- Tilting a spline nut or spline shaft may cause them to fall by their own weight.
- Dropping or hitting the Ball Spline may damage it. Giving an impact to the Ball Spline could also cause damage to its function even if the product looks intact.

● Lubrication

- Thoroughly remove anti-corrosion oil and feed a lubricant before using the product.
- Do not mix lubricants of different physical properties.
- In locations exposed to constant vibrations or in special environments such as clean rooms, vacuum and low/high temperature, normal lubricants may not be used. Contact THK for details.
- When planning to use a special lubricant, contact THK before using it.
- When adopting oil lubrication, the lubricant may not be distributed throughout the product depending on the mounting orientation of the system. Contact THK for details.
- Lubrication interval varies according to the service conditions. Contact THK for details.

● Precautions on Use

- Entry of foreign material may cause damage to the ball circulation component or functional loss. Prevent foreign material, such as dust or cutting chips, from entering the system.
- Do not use the product at temperature of 80°C or higher. When desiring to use the system at temperature of 80°C or higher, contact THK in advance.
- When planning to use the product in an environment where the coolant penetrates the spline nut, it may cause trouble to product functions depending on the type of the coolant. Contact THK for details.
- If foreign material such as dust of cutting chips adheres to the product, replenish the lubricant after cleaning the product with pure white kerosene.
- When using the product in locations exposed to constant vibrations or in special environments such as clean rooms, vacuum and low/high temperature, contact THK in advance.

● Storage

- When storing the Ball Spline, enclose it in a package designated by THK and store it in a horizontal orientation while avoiding high temperature, low temperature and high humidity.
